CEDIA heads to the Lord's Cricket Ground in London for the Tech Summit tour-- a free to attend event promoting real-world education, practical business development and networking for all involved.

Taking place on 4 April, the London Tech Summit features four 45-minute presentations, with trade supplier members focusing on key categories such as audio, video, lighting and security. CIE will provide a comprehensive guide to specifying and installing a high quality intercom solution as part of a smart building solution or MDU project, before Focal takes an in-depth look into the ever-expanding home cinema market, with a focus on maximising performance, subwoofer placement, the importance of phase coherency and an introduction to Dirac Live.

After lunch, Blustream UK sets to answer the question of whether it is worth investing in 8K displays with a look at HDMI specification. Rako Controls will discuss the changes in dimming technology over the past 10 years, covering different types of LED lighting used in residential projects.

In between the seminar sessions visitors can meet all sponsors, namely Alltrade, Amina, AWE, Blustream UK, CIE, Control4, Crisp Accountancy, Focal, Future Automation, Gallo Acoustics, GJD, Invision, KEF, LG, LILIN, Lithe Audio, Lutron, Meridian Audio, My KNX Store, OneAV and Rako Controls. Following the day of education, CEDIA will host a networking drinks reception.
