NEC's MultiSync EX231W LCD display wins Germany's renowned iF international product design award 2011.

The prize-winning design of the NEC monitor was created by Japanese industrial designer Naoto Fukasawa.

MultiSync EX models, says NEC, are well received in the enterprise market thanks to their slim form, lightweight and extremely narrow stand. They can be stylishly integrated into office surroundings. "We expect future offices to become simpler and cleaner and the design of the monitors to become increasingly minimalistic to allow the image to take precedence."

Another special features include a stand and axis 75% smaller than any NEC stand before.
