

The European Zigbee Developers' Conference is on its 5th year, with discussion on the various applications of short-range wireless networks (SRWN).

Taking place this May in Munich, the conference is an exhibitor showcase for new hardware and software ZigBee products, as well as a platform for learning on the current and future status of the system's development.

Attendees will be able to compare certified platforms and try out transceivers, microcontrollers and network stacks.

ZigBee Alliance chairman Bob Heile will open the conference with his "ZigBee-- wireless control that simply works" keynote, while a number of industry speakers and exhibitors will give talks throughout the event.
