

CEDIA Videos on Emerging Threads

Written by Marco Attard
19. 04. 2011

CEDIA's Technology Advisory Group releases its first video in a series on the topic of emerging trends.

It covers a number of issues in current and near-future industry trends in the business--including tablet PCs, connected TVs, digital home health, power smart metering and 3DTV.

CEDIA says the new series aims to help its members (and members of the electronic systems industry) keep up to date on the industry's threats and opportunities.

The association will continue releasing such videos every quarter, with the next video set for July 2011.
