ZigBee Demands Smart Energy Feedback

Written by Marco Attard
19. 07. 2011

The ZigBee Alliance releases the latest draft of its Smart Energy 2.0 standard for public review and comment.

Smart Energy 2.0 is an IP-based energy management solution running on both wired and wireless communications protocols, including those from HomeGrid Forum, the HomePlug Powerline alliance, the Wifi Alliance and ZigBee itself.

This draft 0.7 document collects the Smart Energy Working Group's progress on the topics identified during the last ballot-- and will now enter the next 30-day ballot period.

The Alliance is also looking for public input (as well as comments from its key external stakeholders) to ensure "the highest levels of participation and industry cooperation."

You can find all Smart Energy 2.0 related documents-- together with the online comment submission form-- at ZigBee's website. Comments will close on August 15 2011.
