RTI expands its partnership with UK-based distributor Invision, as RTI products will now be available in the Netherlands through an exclusive distribution deal with Invision Europe.

"Invision offers a well-balanced portfolio of custom install solutions backed by excellent service and support," RTI says. "Through our partnership with Invision UK, we're already well aware of the incredible benefits Invision provides our dealers. Now we look forward to extending that same great experience to the integrators in the Netherlands."

Part of Invision UK, Invision Europe will provide direct access to the full range of RTI control and automation solutions, together with dedicated dealer support services such as access to product shipping from stock, technical support and training.

"RTI is a well-known, trusted name in control and automation," Invision Europe adds. "Their innovative offerings and high level of personalisation perfectly align with the integration solutions that are already part of our product stable, and we are excited to have the opportunity to expand our business together into the Netherlands."
