Pan-European AV connectivity distributor OneAV announces a partnership with wireless network solution provider Cel-Fi-- one having Cel-Fi products join the OneAV portfolio of smart home products.

"Network coverage problems are something everyone has experienced at some point or another, and we're thrilled we can now offer installers the chance to eliminate this from their client's homes, offices, or even their vehicles," OneAV says. "We're really happy to be the only distributor within the CI channel collaborating with Cel-Fi and see a great future ahead of us. Trade account holders can look forward to the usual benefits OneAV offers – such as credit accounts, trade discounts, and easy-ordering."

According to Cel-Fi, 50% of smartphones still struggle with network issues. Cel-Fi products optimise cellular coverage in business, residential and transportation applications, ensuring full

coverage no matter the location. Cel-Fi baseband processors are optimised to process radio frequency signals at "incredibly low" latency, ensuring seamless operation between mobile networks and handsets for all 3G and 4G/LTE technologies and services.

As well as distributing Cel-Fi products, OneAV will also provide training sessions showing how one can install products such as the QUATRA cellular signal boosters in less than a day.
