Sandbox launches SandboxHome, an all-wireless security product complete with security cameras, intrusion sensors, smart doorbell and mobile device apps customers can install in just 15 minutes.

According to the company the system instantly sends text, sound, video and photo alerts to user devices as soon as it detects motion or intrusion, and provides remote access to camera and doorbell video and audio via iOS, Android and Windows apps. It is configurable (thus preventing sensors from going off when a pet moves across the room) and even allows the storage of motion-activated video and sound clips on PCs or cloud storage accounts.

The compact monitoring devices carry all wifi, networking, AV encoding, battery, encryption and other related technologies, Sandbox claims. The company also offers on a subscription basis is an optional 24/7 professional monitoring service.

"Families want and need basic, affordable security in their homes. They want to be alerted instantly to what's happening wherever they may be and whatever they may be doing. At work, in the car, at a restaurant or even out of town," Sandbox says. "And video is a must-have for a family security solution to be effective and actionable. SandboxHome provides all of these."

SandboxHome is currently available as a preorder on the Indiegogo crowdfunding service, where the company says it got 200 orders from 15 countries in all of 10 days. Following the campaign the product should hit the market from March 2015.
