Security vendor Lilin launches its latest Network Video Recorder (NVR) models, as well as a covert surveillance solution, at ISE 2015, which the company says are designed for the custom installation market.

Featuring high gloss black enclosures and no front panel controls, the NVRs handle 16 channels and are available in 100, 200 and 400fps versions-- the NVR100L, NVR200L and NVR400L.

The other Lilin offering at ISE is the IPC0122-- a modular pinhole camera the company describes as a "discreet IP solution." It streams 1080p images at 30fps, with a 6m cable allowing installation flexibility, and can send email alarms when either detecting sound and motion or tampered with.

A Lilin app allows customers to check footage on mobile devices, while SD card support allows for recording.

The above mentioned NVR series and IPC0122 launch with Control4 drivers, with support for other control systems to follow.
