Lilin launches the ZR8022-- an IP camera featuring a new chassis, 2MP CMOS sensor and a powerful 20x optical auto focus lens allowing zoom adjustments via browser control.

Available in 2 versions (the ZR8022X20 with 20x 4.7-90mm zoom and the ZR8022X10 with 10X 5-50mm zoom), the camera includes a built-in backbox for tidy wiring. Power comes through either 802.3at PoE+ or standard DC12V adapter, while a rear ball joint allows for on-wall or on-ceiling mounting.

The company adds the camera features Sense Up+, a technology able to improve video quality during low light conditions through a combination of image signal processing, AGC control and 3D noise reduction. Being IP-capable, it streams 1080p video at 30fps complete with 2-way audio, and customers can set up email alerts triggered by tampering, audio, face and motion detection.

A companion LilinViewer app handles remote viewing from anywhere, while recordings take place on either SD card or NVR. The camera is compatible with control systems from the likes of Control4, Crestron, AMX, Savant, Elan, RTI and URC, and includes ONVIF Profile S support.
