Schlage announces an update of the Sense Smart Deadbolt app-- one adding compatibility with the iOS 10 Home app to allow control via Siri voice commands or the iOS Control Center.

The update also brings push notifications whenever the deadbolt is locked or unlocked, while the Schlage Sense app allows users to manage access codes, change lock settings, view the last 100 times the lock was used, receive installation help and contact customers service.

The Schlage Sense Smart Deadbolt features a touch keypad for the entry of access codes (up to 30 codes can be available at a time) for entry without the Schlage or Home app. The updated app is available now from the App Store.
