RTI products get integration with another security product-- the Mobotix T25 IP video door station, via driver allowing 2-way audio and video communication with RTI intercom-enabled user interfaces.

"With the integration of MOBOTIX, RTI dealers can incorporate the video and voice capabilities of Mobotix's door stations into their customer's control and automation experience," the company says. "The ability to easily see and respond to visitors at the door is a great feature to offer clients, providing them with additional security and convenience."

The T25 door station promises 2-way video from anywhere in the world with no blind spots. It also offers sound recording, keyless access, integrated messaging function and door release via peripheral devices. The Mobotix-developed driver integrates the T25's audio using SIP-based VoIP, while MJPEG streaming handles video.

The driver is compatible with the KX3, KX7 and KX10 in-wall touchpanels, CX7 countertop/under-cabinet touchpanel and the T3x remote control.
