Ring makes a trio of additions to the Floodlight Cam outdoor security camera line-- the Spotlight Cams, with models featuring either wired, battery or solar power.

The Spotlight Cams are similar to the Floodlight Cam, but feature a different lighting system in the shape of LED panels that automatically turn on when the cameras detect motion. In addition, they also feature a 1080p camera with night vision, two-way audio and a 110 dB siren. User control and integration with other Ring products come through the companion Ring app.

The Wired model includes a 270-degree motion detection angle, 140-degree camera field of view and a 7m power cable. The Battery model includes x2 6000mAh removable, rechargeable batteries (the same as the one found in the Ring Doorbell 2), with one battery automatically kicking in once the other is drained. The Solar Cam also uses x2 6000mAh batteries, and adds a Ring solar panel for power.

The Spotlight Cams ship from Q3 2017 in two colour options, black or white.
