ControlWorks releases a module allowing Crestron control systems to control DoorBird IP door stations, complete with two-way SIP voice communications, camera viewing and door release relay control.

It also provides status reporting for doorbell button presses and motion, and allows for extensive programming capabilities.

The module is available as a free download for temporary testing. Permanent activation of the module requires an activation free. It supports DoorBird models D101, D101S, D201, D201B, D202BB, D202, D202B, D203 and D204, and Holovision models 831, 731 and 430.
