01. 02. 2018

ISE 2018 houses the showcase of a range of Lilin products-- including a number of additions to its camera and network video recorder (NVR) line.

Products on display include the NVR 5 series capable of supporting 4K resolution across all 32 channels. All models offer 300Mbps throughput, 120fps individual camera recording (960fps in total) and are compatible with all Lilin cameras. The NVR can also be integrated with most leading home automation platforms via IP drivers, as well as controlled via the LilinViewer app.

The company will run a number of presentations at ISE. Titled "Understanding Cyber Security Threats in Surveillance Systems," these present an overview of the risks and threats installers need to consider, as well as recommendations on best practices.
