DoorBird announces an addition to the D21x IP video door station range-- the D2101KV, an intercom designed to address "worldwide demand" for a single residence flush mount Doorbird complete with keypad and RFID.

The D2101KV incorporates a 1-call button and a multifunction keypad. Aimed at single-family homes and commercial properties in need of an access control system, it is made from brushed stainless aluminium and offers an integrated RFID reader and the ability to assign as many as 100 different codes for access. The intercom can also send HTTP requests to broader smart home systems to trigger events via the keypad.

Doorbird also announces the front panels for the D2101V, D2102V and D2103V door stations are now available in a number of different colours and finishes, offering customers greater flexibility.

The D2101KV ships from August 2018.
