Described as nothing less than the evolution of luxury hardware, the Baldwin Evolved smart locks allow customers to easily lock and unlock doors via smartphone and Kevo mobile app.

The easy to use app provides eKeys for remote access, real-time access history and remote unlocking capabilities. The Evolved design conceals the technology in a smart, sleek interior design the company says is 60% smaller compared to other products on the market. Connectivity comes via Bluetooth, and Baldwin offers 19 handleset styles and 3 deadbolts, as well as 17 finishes for a customisable look.

Also launched is the TouchScreen collection-- with 5 styles and advanced capacitive touchscreen technology. The offering combines SecureScreen technology with Baldwin design for a simple electronic solution. Users simply activate the screen with a fingertip before entering a 4- to 8-digit code for unlocking. Additionally, one-touch locking capability provides quick departures with no key or code required to lock the door.

The TouchScreen offering is available in 2 deadbolt styles in 17 finishes, and can be paired with 3 coordinating handleset grips for a signature code. The keypad is backlit for increased visibility, and SecureScreen technology prevents code detection from fingerprints on the display.
