CEDIA Expo 2019 sees Brilliant and Schlage announce a collaboration bringing more simplicity to the smart home and home technology industry by combining products from the two companies.

Specifically, the Schlage Encode smart wifi deadbolt integrates with Brilliant Smart Home Control, giving customers complete access control. The integration allows users to lock and unlock doors directly from any wall-mounted Brilliant Control or using voice commands through integration with Amazon Alexa. Homeowners can also control locks as part of home automation scenes.

The integration, the two companies add, also makes it easier for custom installers to create safer, smarter homes for end users. The Schlage Encode deadbolt features built-in wifi, making additional hubs and gateways unnecessary and allowing it to be added simply to a wider variety of smart home ecosystems. Thus, the ability to seamlessly connect with Brilliant provides more option during home construction.
