Kwikset unveils its Contemporary Smartcode Deadbolt, its latest ZigBee and Z-Wave offering.

It carries Home Connect technology, with remote locking through a motorised deadbolt. Once integrated into a home control sytem, users can activate the deadbolt from anywhere via web-enabled smartphone.

The SmartCode Deadbolt needs x4 AA batteries, eliminating any hardwiring.

Kiwkset's offerings work wirelessly with other home electronics (including lighting controls and thermostats) with wireless communications secured using 128-bit encryption.
