

"Quietest Motor" in Crestron Shades

Written by Marco Attard

Crestron claims the motor in its motorised shades line is "the quietest on the market," thanks to new low-voltage Quiet Motor Technology (QMT).

The line includes roller shades, Roman shades, skylight shades and drapery track systems, all with designer-inspired fabrics and hardware finishes. Being "Integrated by Design" the Crestron shading solutions work with lighting, AV, climate and security systems from the company.

Control comes through all Crestron systems, including touchscreens, keypads, remotes and Apple/Android devices. Installers can also integrate the shades with Crestron lighting presets for complete control of daylight and electric light.
