Crestron Releases Shades Design Tool

Written by Marco Attard
24. 10. 2012

Crestron makes selling its new shades portfolio more simple with the Crestron Design Tool (CDT)-- a web-based design tool simplifying design, quotation and ordering tasks.

It has various benefits such as:

- Automatically selects the appropriate motor and tube size
- Eliminates guesswork-- all configuration options are displayed, and if you make an incompatible selection CDT shows how to correct it
- Access can be granted to multiple employees so you have visibility and access to all projects-- even if someone is out of the office
- Easily organize shades in every room by creating a project hierarchy (by window, room, or entire building) making it easier to find what you are looking for
- Generate quotes for a specific room, floor or building easily
- Quote and order individual portions of a project
- Email quotes and other project related detail to anyone directly from the software

The CDT is availabe to all Crestron dealers who completed Crestron Shading Solutions training.
