Crestron's CLS-EXP line of lighting expansion modules. Providing custom installers and integrators with an added level of versatility when using Crestron dimmers and lighting solutions, the CLS-EXP modules enable the Crestron iLux™ lighting system and other Crestron lighting dimmers to handle more load types, a wider range of voltages, and larger loads.

CLS-EXP modules work with iLux integrated lighting systems, CLW-Series in-wall dimmers and select CLX-Series lighting control modules. Easy to install, CLS-EXP modules connect to the output of the controlling dimmer just like a light fixture. Each model can be quickly wall mounted and include conduit knockouts on the bottom and lower sides.
