Linear adds Z-wave lighting products to its wireless residential and commercial offerings-- a benchmark for the company looking to unify wireless lighting control with existing security and access control systems.

Z-Wave-enabled lighting devices from Linear include wall dimmers, wall switches, wall outlets, lamp modules, appliance modules, 3-way switches/dimmers and fixture modules.

Such products fit with offerings from recent Linear acquisition 2GIG Technologies, since the 2GIG GO! Control platform is Z-Wave certified and provides a control panel for lighting, security and access control management.

Z-Wave is an international standard for intelligent, interoperable, low-power, RF mesh networking technology. A smart chip and compact protocol enable 2-way RF communications between Z-Wave enabled devices.
