Savant launches 2 wifi-enabled Lamp Modules and 2 Plug-in Modules as part of the SmartLighting lineup, providing customers with easy control over plug-in devices without need for an electrician.

Lamp Modules are available in two versions-- one controls a dimmable load and the other provides an on/off switch. Compatible with Savant wifi lighting controllers and keypads, both are available with an optional tabletop keypad, giving users control over the connected appliance.

One can also adapt the keypad for additional functionality within a Savant control and automation system.

Meanwhile the Plug-in Modules act as another SmartLighting-compatible wifi-enabled connectivity option. Like the Lamp Modules, the Plug-in Modules are available as either dimmable load or on/off switch versions, and according to Savant both provide wifi connectivity and built-in protection at cost-effective price points.

All are ideal for retrofit installations due to no rewiring requirements.
