Belkin expands the WeMO devices portfolio at CES 2014-- the product range now includes the LED Starter Set, Smart LED Bulbs, Maker Kit and the Crock-Pot Smart Slow Cooker, as well as enhanced Android and iOS apps.

The LED Starter Set includes a WeMo Link and two LED Smart Bulbs, and allows one to control, schedule and dim smart LED bulbs from anywhere via internet connection. The Smart LED Bulbs replace standard light bulbs, are dimmable, and provide 800 Lumens of warm white light.

Bulbs are controllable either individually or in groups via wifi and WeMo app, with the Link unit handling up to 50 individual bulbs.

Meanwhile the WeMo Maker is ideal for more DIY-focused customers. It allows one to build WeMo solutions by adding internet connectivity to any device controlled with a DC switch. It is a small module one can wire in low-voltage devices, and is controllable with the same app as the rest of the WeMo ecosystem.

Also seen at CES 2014 is the WeMo-enabled Crock-Pot Smart Slow Cooker-- reportedly the first smartphone-controllable slow cooker, allowing one to adjust cooking settings (time, temperature) and check dish status from anywhere via WeMo app.

All WeMo devices seen at the show should hit the market from Q2 2014.
