ISE 2016 sees Control4 launch the Square Wireless Lighting portfolio-- a product line consisting of a Wireless Dimmer, Wireless Switch and Wireless Keypad in a compact form factor fitting European wallboxes.

"Our new international design and form-factor opens the European and Asian smart lighting market to our international dealer network" Control4 says. "By combining our proven wireless smart lighting control technology with international design, we now offer an incredibly elegant solution to homeowners around the world, while also simplifying project design and installation for our dealers."

Square Wireless Lighting promises a "myriad" of configurable keypad combinations on every dimmer and switch, with backlit engravings and status LEDs allowing installers to create intuitive smart lighting interfaces. The products also combine with the Entertainment and Automation Series controllers, making it easy for rooms or homes any size to benefit from automated lighting.
