Somfy launches the Irismo drapery motor range with the Irismo 45 WireFree RTS motor and 35 Mini DC low-voltage motor, both promising to be easy to install and easy to conceal.

The Irismo 45 is a rechargeable battery-powered motor Somfy says can be installed in minutes. It offers long-life operation and provides a solution for areas where wiring can be a challenge. Meanwhile the 35 Mini DC motor uses a 24DC power supply plugging directly into a standard outlet, saving time and money by eliminating the need for an electrician.

The motors work with all types of draperies, including Pinch Pleat, Ripplefold and Accordia styles. The compact size makes them easy to conceal, allowing for seamless integration into spaces and improving aesthetic appeal. Advanced track design minimises the light gap, providing greater light control, privacy and UV protection.

A built-in RTS module provides compatibility with all Somfy RTS control options, including handheld remotes, wireless wall switches, sensors and timers. It is also compatible with the myLink app, allowing users to set schedules and control motorised draperies via smartphone or tablet. The Irismo motor range also works with 3rd party automation systems, expanding integration opportunities.
