Leviton starts shipping its line of HomeKit-enabled switches and dimmers-- including the Decora Smart 1000W DH1KD dimmer, the 600W DH6HD dimmer and the DH155 15A switch.

First announced back at CES 2016, the dimmers and switch are HomeKit-compatible and need no hub, allowing users to control them directly together with other enabled 3rd party products via Siri voice commands, as well as the Decora Smart Home app.

The Decora app provides customisable settings according to bulb type, with adjustable fade rate, minimum and maximum illumination levels, and more. One can also add the Leviton switch and dimmers to HomeKit Scenes for automation presets based on time of day, who's home and other parameters.

The dimmers have rocker paddles and an embedded LED display illumination level, and all products include white and light almond colour faces.
