Savant announces a partnership with USAI Lighting to provide installers with residentially focused end-to-end lighting solutions comprised of 6 popular product families encompassing "hundreds" of fixture options.

The collaboration between Savant and USAI Lighting is focused on the configuration and control of tunable white and WRGB lighting. Savant Truelmage technology allows users to experience virtual lights in any room from photographs taken and stored on mobile devices. Users can easily change dimming levels, temperatures and WRGB colours via phone, tablet, Savant touchscreen and Pro Remote, as well as Savant Scene access via voice command.

Savant and USAI Lighting will use the Savant screen engine and USAI Lighting colour research to serve up pre-defined light colour and scene content installers can either implement as is or adjust according to personal preference and project design.

According to the two companies, the combination of tunable white light and WRGB technologies with intelligent automation will allow not only the setting of lights to certain levels and colour temperatures based on executed scenes, but also allow for a single room or even whole home to be put on a default circadian rhythm mode. Light affects the "internal clock" ensuring we are alert during the day and sleepy at night, and mimicking the natural lighting rhythm through smart lighting promises to mitigate circadian disruption, promoting wellness.

"Our partnership with USAI Lighting represents another vital piece of Savant's forward-thinking strategy that includes lighting, climate, energy management, entertainment and a broad range of smart home functionality," the company adds. "Savant enables these advanced technologies to work effortlessly together, providing enhanced lifestyle, environmental responsibility and wellness for the luxury home."
