Gira announces the Studio Design Line-- a selection of 3 models providing installers with means to "emphasise design through colour and create a uniform or contrasting aesthetic."

Available in either "Black" and "White Glass" in 3 different variants, installers get the option to create either a one-colour design with both round frame and square switch are in the same finish, or a two-tone effect with white on black or black on white.

The 3 models consist of a 1-gang flush-mount option, a 1-3 gang flush-mount version and a surface-mount option. The flush-mounted Studio version is the contemporary version featuring a glass cover frame, while the surface-mounted model is aimed at traditional environments, with a period-style design inspired by 20th century style round dome light switches.

Both flush-mounted products can be installed in standard round European back boxes. The surface-mounted model comes in impact resistant, shatter-proof and halogen-free thermoplastic (PC).

The range supports over 300 functions in the home, and works with the Gira System 55 range. Gira Studio can raise and lower blinds with the standard blind control button, and offers a contactless switch with integrated LED orientation that illuminates when motion is detected. A range of complementary sockets, outlets and accessories is also available.

The Gira Studio Design Line ships from October 2018.
