Savant launches an array of architectural lighting strips compatible with the TruelImage-- the image-based lighting technology from the company providing customers with intuitive lighting control.

TruelImage users get a WRGB colour wheel and precise tunable temperature selection, all from the Savant Pro app for iOS or Android devices, as well as a on/off/dim control of a fixture in any room. The Savant LED light strip lineup includes a number of indirect lighting options installers can use in cove lighting, behind flat panel TVs, inside cabinets and more. A tunable white LED strip allows for colour temperature adjustments, changing automatically in concert with circadian rhythm throughout the day or manually as the customer needs.

Also available is a WRGB light strip providing all features found on the tunable white model, plus a selection of millions of colour choices. The Savant Pro app provides for exact WRGB colour settings, making it ideal for interior designers wanting precise control over accent lighting. Homeowners also get access to lighting control through Savant Scenes.

Both tunable white and WRGB strips are available in outdoor versions, and kits with drivers and power supplies are available in 5m and 10m lengths. In addition, an RGB Neon version allows for direct viewing accents similar to neon signs where the individual LEDs are not visible, making the strip appear as a line of solid colour.

All Savant LED light strips are field cuttable, and kits are available with mounting options and various couplers and jumpers allowing installers to custom fit strips anywhere. Meanwhile controller options include a low-voltage DMX controller allowing the wiring of up to 32 strips to a single controller.
