The Retrotouch Crystal iotty switches provide smart lighting control in the home, with built-in wifi allowing lighting control from anywhere in the home or remotely using the Retrotouch iotty app.

The switches are also Alexa and Google Home enabled, allowing use through voice controls. As well as lighting control, the switches integrate seamlessly with other automated home features, including automatic garage doors and gates, shading and door openers. Light-dimming functions and a schedule creator allow users to set the lighting for sunrise or sunset, or select a random lighting mode for extra security when away.

An additional feature is geo-location technology ensuring the lights turn on automatically when the user approaches the house. The switches have a stylish glossy finish on a glass faceplate, and are available in black or white glass with either a one or two switch option.
