Nortek Security & Control announces a NOON Lighting System Driver for the ELAN control system. Built by driver developer Chowmain, it enables NOON Light control from within the ELAN platform.

NOON switches work together to transform the mood of a room or accent an activity. Exclusive bulb detection technology combines with scene-creation algorithms to automatically create lighting scenes using the fixtures already installed in the home. The ELAN NOON driver provides automatic discovery of all loads and scenes in the NOON system, plus two-way control and feedback of lighting scenes and dimming. The ELAN system provides instant feedback when lighting is controlled from a switch or another application.

In addition to ELAN, NOON also integrates with Amazon Alexa, Google Assistant, IFTTT and LIFX.
