At ISE 2012, Arrive showed the **RAVE HD-DUTP-T/R 30**, a 30m (98ft) transport over dual CAT 5e/CAT6 wire mini-passive adapter module.

This is a convenient method for sending uncompressed HDMI from a sender to a receiver module.

The HDMI port can also be connected to a DVI source or destination devices using HDMI-DVI converter cables or adaptors. For install convenience this model is small and modular and does not require external power.

Follows IEEE-568B wiring standards. Auto-adjustment of feedback, equalization and amplification without user intervention
