

Easier Installs with HDMI over IP

Written by Marco Attard

MuxLab launches an HDMI over IP solution capable of streaming HDMI content over any Ethernet LAN-- allowing installers to set up and change AV broadcasts without dedicated cabling systems or additional AV matrix-switching hardware.

The system features 2 devices. The HDMI over IP Encoder (500750) converts native HDMI to IP, allowing transmission over LAN, while the HDMI over IP Decoder (500751) converts the IP signal back to HDMI for playback.

A web-based interface allows device management, as well as optimisation for best performance.
