

D-Tools announces version SIX of its System Integrator software-- a "major on-premise release" with upgrades aiming to increase efficiency and productivity for integrators of low voltage systems.

Using D-Tools cloud infrastructure SIX delivers equipment data, provides partners with direct marketing services and establishes a foundation for future mobile and web-based apps.

The software also provides a "robust solution" for the creation of detailed project proposals and client documentation, complete with system designs (in either Microsoft Visio or Autodesk AutoCAD) and project management capabilities. D-Tools also provides a comprehensive online database of products and accessories from major vendors.

Other SIX features include:

- Re-designed Architecture-- 64-bit support takes advantage of the latest processors and 64-bit applications
- Speed and Performance-- Enhancements to the SIX application framework delivers greater performance, stability and scalability
- Re-designed User Interface-- Improved navigation and workflow makes it easier target critical elements of the software and increase productivity.
- Integrated Data Management-- Tools and functionality geared towards increased efficiency and ease of use
- Cloud Architecture for Data services provides a fast and efficient way to download data from D-Tools comprehensive Data Library
- Expanded Data Library-- up to 1,000,000 SKUs from thousands of manufacturers
- Quick Filters and Product Queries for more efficient data management
- Mass Update to quickly apply changes to products, labour items, or packages
- Price Rules can be created to quickly update products and labour SKUs
- Integrated data feedback-- request new products, report errors, and vote on data quality.
- New Project Editor-- The SIX project editor has been completely re-designed and enables users to add catalog items to projects in a number of ways
- Enhanced Reporting

- RealPic Library of Select MVP Visio Shapes
- D-Tools Connect-- The 1st release of D-Tools integrated analytics and communication system for manufacturers and the D-Tools user community from within the D-Tools System Integrator software environment

D-Tools will launch System Integrator SIX at CEDIA Expo 2012 before it hits the market on September 2012.
