

Long Range HDMI from Magenta

Written by Marco Attard

Magenta promises the eradication of distances with the HD-One DX500 and HD-One LX500 extenders-- delivering HDMI signals for up to 152m over a single CAT6 cable.

The HD-One DX500 supports HDCP-protected 1920x1200 and 1080p HDMI video plus embedded audio. The HD-One LX500 adds 2-way RS-232 and IR signal (36.7, 38.0 or 58.8kHz, user selectable) support.

Magenta claims HD-One500 products use less power, dissipate less heat and offer better performance than similar HD-BaseT-based products.

Both devices come in a kit complete with transmitter, receiver and power supplies (and a pair of IR dongles for the HD-One LX500).
