Extron introduces two larger HDMI distribution amplifiers as part of the HDMI DA Series product line-- the HDMI DA4 (with x4 outputs) and the HDMI DA6 (with x6 outputs).

Both are HDCP compliant and support HDMI specification features such as data rates up to 6.75 Gbps, 12-bit Deep Colour, 3D, Lip Sync and HID lossless audio formats, with HDTV 1080p/60 and PC 1920 x 1200 video.

For ease of integration and reliable operation the HDMI DA Series features a pair of Extron technologies-- EDID Minder (maintains continuous EDID communication between connected devices) and Key Minder (continuously authenticates HDMI encryption between all devices).

Further easing integration are automatic input cable equalisation, automatic colour bit depth management, selectable output muting and monitoring and troubleshooting indicators.
