Atlona ships its HDMI extenders featuring HDBaseT technology-- allowing signal transmission to a distance of up to 100m over a single category cable.

According to the company both AT-HDTX-RSNET transmitter and AT-HDRX-RSNET receiver provide bidirectional control with ethernet, RS-232 and IR remote control for compatibility with 3rd party control systems.

Using Power over Category cable (PoCc), AV, IR, RS-232 and power are sent over a single category cable, without need for a receiver power supply.

The RSNET extender family features locking HDMI ports, USB ports for in-field firmware updates and captive screw connectors for IR, RS-232 and RJ45 ethernet connectors. The devices support UltraHD (4Kx2K) resolutions and CEC pass-through, as well as 3D and all embedded audio signals including Dolby TrueHD and DTS-HD Master Audio.
