Vision's new HDMI connectivity range includes a handy HDMI cable joiner (TC2 HDMIRPT] which is now in stock. The device is an active repeater which joins two HDMI cables together.

If the installer is using high quality 24 AWG cables, he can join two 15m cables together to create a single 30m cable. Vision points out it is not advised to daisy-chain more than two cables.

The active circuit inside is powered by HDMI, and the small device is easy to hide inside a dado rail (chair rail) around the perimeter of a room. It supports the full HDMI 1.4 specification.
