

FSR's DR-SOCK Helps Pull Cables

Written by Bob Snyder

FSR's new DR-SOCK is a creative cable-pulling tool designed to simplify and accelerate every installation requiring cables and connectors.

The DR-SOCK is pre-assembled, easily accessible in frustration-proof packaging and re-useable.

It protects cables and connectors from being damaged by taking the stress off the connection points while pulling through a conduit.

The design opens up to 1.25 inches, and features brightly colored sleeve tips to enable easy identification and a steel ring to allow quick and positive attachment of a pull snake. DR-SOCK can be used to safely pull FSR's new Digital Ribbon Cables as well as others with connector shells.
