---

Flexible and Specialist Cables (FSC) announces the TruHD range HDBaseT-certified Cat5E and Cat6 cables in a variety of colours, all for sale under of the Tru cable brand.

Tested and certified by the HDBaseT Alliance, the cables are ideal for high speed data networks across homes or buildings. As one knows, the HDBaseT standard allows HD video, audio, ethernet, power and control signal distribution over a single cable for up to 100m.

TruHD cables ship as 305m "reel in a box" packages to maintain cable quality, prevent snags and enable easy pull when routing.

For easy identification the Cat5E cables are available in blue (PVC or LSHF), red, orange, yellow and green, while the Cat6 come in blue (PVC or LSHF), red, white, purple and yellow.

Tru also offers a range of end termination solutions, including EZRJ45 connectors, boots and tooling.
