Vision starts shipping new TC2 installation cables, including the High-Speed 4K-ready Category 2 HDMI cable with gold-plated connectors, available in the company's trademark white.

Lengths start from 0.5m patch cables and reach up to 15m. Cables up to 5m long use 28 AWG wire cores, 10m cables use thicker 26 AWG wire and 15m cables feature 24 AWG. According to the company a 6 AWG difference represents a doubling of thickness, meaning the 15m cables feature conductors twice as thick as those found in most consumer-class 30 AWG cables.

Also available from Vision are USB cables with ferrite cores in lengths of up to 15m with an included inline booster. Vision recommends using the 10-15m cables with its new Techconnect USB module, which features an active booster circuit.
