Hosa Technology launches a means for easier interfacing of consumer products with professional equipment-- the Hosa Pro cable line and the Hosa Pro Breakouts.

According to the company the Hosa Pro Breakouts allow customers to seamlessly interface any consumer audio product equipped with a stereo minijack output with professional units sporting quarter-inch Tip/Sleeve, XLR or even RCA connectors.

Breakouts are available in 3 configurations-- the HMR-000Y series 3.5mm TRS (tip/ring/sleeve) to dual RCA option (ideal for DJ mixers and home strew systems), the HMP-000Y series 3.5mm TRS to dual 1/4-inch TS (tip/sleeve) breakout (can be plugged into patch bays or mixer phone inputs) and the HMX-000Y series 3.5mm TRS to dual XLR3M breakout (for connecting into discrete channels on professional mixers).

All 3 series feature nickel-plated REAN connectors (a Neutrik AG brand) for efficient signal transfer and durability. The cables carry 24 AWG Oxygen-Free Copper (OFC) conductors for enhanced signal clarity and 90% OFC spiral shields for a higher signal to noise ratio.

The HMR-000Y and HMP-000Y series are available now, while the HMX-000Y should ship from January 2015.
