BTX Technologies launches fibre-based HDMI cables for 4K applications in lengths ranging from 5m up to 100m, all with lightweight assemblies ideal for use in tight spaces such as floor boxes.

The cables include EDID transmission and support HD (1080p) and 4K/UHD video, with deep colour (48-bit) 4:4:4, 3D and multi-channel digital audio on a single cable. Utilising fibre optics, the plenum-rated cables are specified to provide full signal integrity over the distance of the cable.
