# HDMI Cables Get Premium Certification

Written by Marco Attard
06. 10. 2015

HDMI Licensing announces the Premium HDMI Cable Certification Program-- a program involving additional and enhanced HDMI cable testing and a unique anti-counterfeiting label.

"With rapid growth of feature-rich, 4K/UHD content, it's critical that all components in a 4K/UltraHD HDMI-connected system are fully capable of delivering on the experience," the company says.

The program includes a best-practices design note and an expanded set of cable testing requirements to ensure cables reliably support the full 18Gbps bandwidth required by HDMI 2.0 specification. Also involved are testing guidelines for EMI levels to minimise unwanted interference with wireless signals.

Testing takes place at HDMI Autorised Testing Centres (ATCs), and cables making the grade get registered with HDMI Licensing. Vendors alsoget the right to brand and promote cables as Premium High Speed HDMI Cables or Premium High Speed HDMI Cables with Ethernet through tamper-proof anti-counterfeit holographic labels manufacturers, distributors, retailers and consumers can check through a mobile app.

"Consumers can easily identify Premium High Speed HDMI Cables and be confident that their new 4K/UltraHD TVs, sources and cables will deliver an ultra-reliable, 4K/UltraHD experience," HDMI Licensing concludes.
