Installers needing to extend 4K over fibre optic can get the Cleerline 4k2kHDMITC, a means to deliver 4K/UHD video up to 300m, providing an alternative to standard Cat cable runs.

Designed for use with OM2 or greater multimode fibre, the 4k2kHDMITC extender set features built-in diagnostic LEDs. Power comes through micro-USB while bandwidth reaches up to 10Gbps. The transmission path supports HDCP, EDID and CEC control, and the baluns can be used with the Cleerline SSF fibe designed and termination solution.

As well as boosting 4K signal reach the extender set removes the need for an entire HDMI lead per outlet from the matrix-- the new Cleerline balun measures just 60x10x22mm, compared with the 55x22x85mm dimensions of a UTP extender.
