Try to access content from your TV using an HTPC and you'll discover that you need to balance a keyboard, mouse and pad on your knees...

GlideTV thinks a universal remote is limited by its two-axis movement ("Not enough to navigate today's websites," they say.)

Cumbersome, even frustrating? That's where GlideTV Navigator comes in...it combines the functionality of a keyboard, mouse and AV remote in a stylized device that fits the palm of your hand.

GlideTV is a clickable touchpad mapped to your TV screen with precise cursor control, one-thumb scrolling, single and double-click selection. Backlit AV buttons to control volume and playback.

On-screen keyboard.Integrated search menu with links to *Google, Amazon Video on Demand, Hulu, Netflix, YouTube* and more.

Go **GlideTV**
