15. 02. 2017

Xantech announces the EX series HDMI cables at ISE 2017, promising a boost in performance, reliability and value for money with 4K 60 4:4:4 resolution capability with 600MHz pixel rate.

The cables distribute HDR video with bandwidth faster than 18Gbps at 4K@50/60 (2160p), or 4x the resolution of 1080p/60 video. In addition all EX series cables feature patented C-Grip locking connector technology able to resist over 4.5kg of force, virtually eliminating truck rolls caused by loose cables.

"We extend Xantech's reputation for value-added innovation to a product category that integrators are using on almost every project," the company says. "Xantech's new HDMI cable series delivers the high performance value that integrators need for the growing number of video installations they work on every day."

The EX series HDMI cables are available from March 2017 in 9 lengths-- 0.7, 1, 1.5, 2, 3, 4, 5, 7.5 and 10m. Cables up to 4m will also be available in bulk packs for added convenience.
