

Metra Launches Install Bay Cables

Written by Frederick Douglas
25. 01. 2018

Metra Home Theatre Group announces the ISE 2018 debut of the Install Bay active fibre cables-- a combination of high performance with 18Gbps transmission, 4K/60, 4:4:4, Deep Color and HDR at HDMI 2.0 specs.

Install Bay cables feature an energy efficient Rx/Tx chipset, eliminating the need for additional external power for a cleaner and simpler installation. The cables also include ethernet over HDMI support, and LC3 or CMH plenum rating. Finally, the head, shell and jacket design promises to be robust for a reliable solution.

"Our Install Bay Active Fiber Cables provide integrators with a new standard for value and performance in cables," Metra says. "We're excited to launch the Install Bay Active Fiber Cable at ISE 2018, along with an extensive lineup of home theater solutions and accessories for our integrators throughout the world. We invite those attending ISE 2018 to visit our stand and check out the latest cutting-edge technology from Metra Home Theater Group."
